

Weekly Update

Cappy Pugliese

4/07 - 4/11

This week

Monday 4/7

- evolunch: talked about epistasis and ways to measure fitness
- read the last paper for EEB 5300

Tuesday 4/8

- lab working session
 - learned a lot more about the GATK pipeline
 - learned about phred likelihood scores
 - learned a bit more about submitting multiple jobs at a time
 - did a bit of reorganizing on the cluster
 - saved my EEB 5300 class scripts to github
 - looked at sample data
 - * added in geographic location data that I found from my previous class project
 - * still need to look into finding the rest
- finalized advisory committee meeting
 - will have to keep Elizabeth updated since she can't make it
- sent out some emails

Wednesday 4/9

- worked a bit more on my group project, we are starting to make some progress
- updated this week's and last week's weekly updates

- struggled with getting python to work in vscode for class and ultimately gave up (had to use google colab instead)
 - I've been learning python in EEB 5300, but I'll admit I'm not the biggest fan since I'm so used to R
